

CALL FOR PARTICIPATION

"Strategies and Technologies for Cloud Computing Interoperability (SATCCI)"

SATCCI Spring 2009: Workshop for Federal Computing Stakeholders

We are pleased to announce an all day Workshop entitled "Strategies And Technologies for Cloud Computing Interoperability (SATCCI)" to be held in conjunction with the Object Management Group (OMG) March Technical Meeting <http://www.omg.org/news/meetings/tc/dc/info.htm> on March 23, 2009, Hyatt Regency Crystal City, Va. USA

The SATCCI Workshop will provide leaders in the Federal computing community with an overview of Cloud Interoperability/Portability issues and possible solutions. The Workshop will increase the attendees understanding of this area, will encourage ongoing participation from attendee organizations, and gather feedback on future requirements for open Cloud Computing deployments. This feedback can help guide future Cloud Computing standardization organization deliverables.

Representatives from groups working on Cloud interoperability and portability will be invited to present their approaches at interactive sessions. Invited presenters include the [Cloud Computing Interoperability Forum](#), the [Open Cloud Consortium](#), the [Open Grid Forum](#), the [Open Group](#), the [Distributed Management Task Force](#), the [Network Centric Operations Industry Consortium](#), the [Object Management Group](#), and vendors with active interoperability and portability efforts.

One motivation for the SATCCI Workshop aimed at the Federal IT community is that the new administration will be making critical technology funding decisions in the next few months. The SATCCI organizers will invite representatives of major Federal computing organizations to attend and participate in making this a practical, productive, and timely Workshop.
