

# Locating Nodes With EASE

# Like and Dislike

Age Matters: Efficient Route Discovery Using Encounter Ages

---

- Like

- Nice idea
- Automatic load balancing

- Dislike

- Memory not scalable ( $O(n)$ )
- Simulations, no real experiments
- Malfunction; Malicious (hard problems)
- Performance with more realistic mobility model
- Missing bootstrap analysis
  - Mobility model; nodes distribution
- Is it true? Be stationary while communicating
