## WELCOME!

We are a non-profit, non-product advocacy of lightning safety for people and for structures.

**We Teach. We Consult. We Research.**

- **People Safety** - means anticipating a high risk situation and moving to a low risk location.
- **Structural Safety** - means employing exterior and interior defensive subsystems with considerable attention to detail. This is a site-specific process.

For an overview of **21st Century Lightning Safety Methodology**
