Education and Professional Experience:

Education:

B.S., 1985- St. Norbert College
PhD, 1990-The Ohio State University

Professional Appointments:

Co-director of Fundamentals of Molecular Medicine curriculum for Cleveland Clinic Lerner College of Medicine at Case Western Reserve, 2004
Project Scientist, Department of Immunology, The Cleveland Clinic Foundation, 1993-present
Post-doctoral Fellow, Department of Immunology, The Cleveland Clinic Foundation, 1990-1993

Scholarly Interest :

My scholarly interests include teaching and curriculum development for medical school education, and research in basic science. I am interested in integrating the basic sciences into the entire medical school curriculum, but am immediately concerned with doing so for the first year summer Fundamentals of Molecular Medicine course. My basic science interests extend to understanding the mechanisms of inflammatory gene expressions.

Personal Background:

I am originally from Wisconsin but moved to Ohio for my graduate school education and subsequent post-doctoral position. I got involved in medical education serendipitously by serving as a course facilitator and am now serving on several committees that encompass many aspects of medical education, and specifically how the basic sciences can be integrated into the entire curriculum including clerkships. My interests outside of my profession include running, reading, art, music, theater, and travel. I have two young daughters and a husband that are learning to enjoy the same activities!
