

DRILLING

MAKE THIS SIMPLE JIG FOR PERPENDICULAR HOLES

Some projects call for you to drill holes perpendicular to a work surface. If the workpiece is too large for your drill-press table, the easy-to-make jig *above* is a great time-saver. Join two blocks of wood at a 90° angle as shown. By holding your drill bit in the corner of this simple jig, you can bore perpendicular holes accurately with many sizes of twist and brad-point bits.
