

Introducing the Apple eMate 300.

It's affordable.

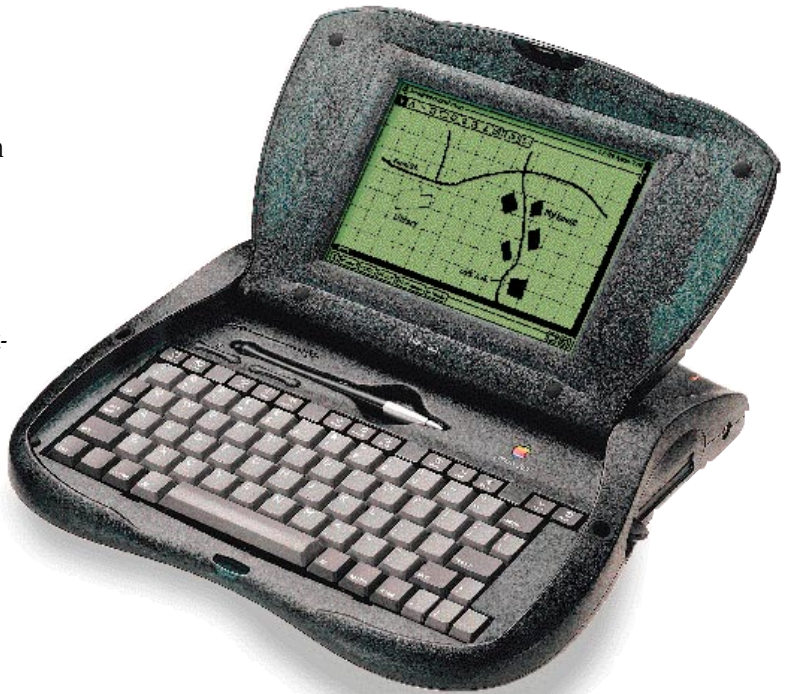

The Apple® eMate™ 300 is the first of a new class of affordable mobile computers that works as a companion to Mac OS and Windows-based computers.

It's flexible.

With built-in writing, drawing, calendaring, graphing, and spreadsheet software, as well as features such as instant-on and auto-save, users can get right down to work with the easy-to-use eMate 300. It lets users enter data by keyboard or with a stylus, so users can work the way that's best for them.

It's connectable.

The eMate 300 makes it easy to share information and files with Macintosh computers and Windows-based PCs. By doing preliminary work on the eMate and then enhancing it on a desktop computer, the eMate 300 is a perfect companion to the computers that already exist in the home or office. Add a modem* and the eMate connects to the Internet.

It's durable.

The tough outer case, sturdy carrying handle, and battery life of up to 24 hours all help eMate endure the rigours of the most demanding day—no matter who's walking (or running) with it.

It's portable.

Designed to let users work wherever learning and working take them, eMate leads to discovery in the most interesting and inspiring places—in a classroom or office, in a lab, outdoors, or at home.
